

Transportation & Storage

FROZEN STORAGE OF WATER DAMAGED MATERIALS IS OF THE UTMOST IMPORTANCE

Under normal conditions, there is a 72 hour window before mould growth begins.

Interior Vault has the capacity to store a moderate number of wet boxes depending on the amount of boxes already holding in the freezer.

If the quantity of boxes is large, please take the time to call and alert us, so that we can make necessary arrangements.

When transferring the boxes into the truck, please keep in mind that they may not be transported to Interior Vault in a vehicle without air-ride capabilities. Always pack the heaviest of boxes on the bottom of the stack and the lighter boxes on the top to prevent crushing of the lower boxes.

Fragile boxes should be clearly marked and always placed on the top of the stack.

Never stack more than 4 boxes high.

Secure the boxes to prevent shifting.

Alert us that the truck is on its way with the boxes and if they will be arriving after hours so that a staff member can receive the materials.
